## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 21 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Unger et al (US 5,244,460).

Unger et al disclose in column 5, lines 22-33 a method comprising a delivery instrument and a flowable agent causing the formation of lumens in the myocardium arranged to introduce particles at an entry site adjacent the cardiac tissue, generating a force external to the body to cause particles to pass through the contiguous tissue to target cardiac tissue without any mechanical means carrying said particles.

### *Response to Arguments*

Applicant's arguments filed 9/25/2006 have been fully considered but they are not persuasive. Applicant argues that "Unger et al is devoid of any disclosure of the use of flowable agent comprising a plurality of small particles which pass through tissue contiguous with an entry situs to target tissue," that "Unger et al does not teach forming a plurality of channels in the wall of the myocardium," and that "there is no teaching or suggestion that the materials would be carried into and through the tissue under the impetus of a particle moving force generated outside of the body." Examiner maintains that the delivery of peptides constitutes a "flowable agent comprising a plurality of small particles." Furthermore, these are blood vessel growth promoting peptides, particularly ones which foster myocardial blood vessel

growth (column 1, lines 9-10). Since the peptides are delivered to the coronary artery (by an impetus of a particle moving force in the form of being injected from a catheter), but treat heart tissue, the peptide particles pass from the entry situs without any mechanical means carrying the particles into the target cardiac tissue.

### *Conclusion*

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
